BlueCotton

Financial Service Compliance That Doesn't Cost The Team's Morale.

Challenge

A mid-sized DC area public company struggled to juggle the adoption of new technology while meeting their SOX compliance requirements. An early adopter of technology with a focus on usability and security, it was a challenge to marry the two. Their traditional on-premise infrastructure with limited accessibility options was a security posture that satisfied auditors, but left staff underwhelmed and frustrated.

Solution

To address the company's requirements, Blue Cotton created an architecture within Microsoft Azures cloud that provided the compliance mandated security, controls and auditing requirements, while leveraging technology to improve the end user experience.

Additionally, Blue Cotton implemented redundancy and a robust recovery and provisioning process to further eliminate setup and user error.

Results

The results of Blue Cotton's strategy and implementation allowed this firm to strengthen their security and compliance while increasing their team's output, efficiency and satisfaction.

Key Takeaways:

- Understanding a business's vertical expertise, processes and compliance requirements are critical in crafting an enterprise solution.

- Robust enterprise architecture and strategic design provideds a secure and user-friendly platform.

- Real-time visibility into data protection and employee efficiency can lead to greater productivity.
